CCUS Decisions Depend on More Than Project Data

Project data alone doesn't tell the whole story. Understanding the CCUS market means connecting industrial emissions, infrastructure, transport and storage, investment and supply chains.

The Fragmented View

Isolated datasets provide information but not the full picture.

- Projects
- Industrial Emissions
- Infrastructure
- Investment & Policy
- Supply Chain

The Connected View

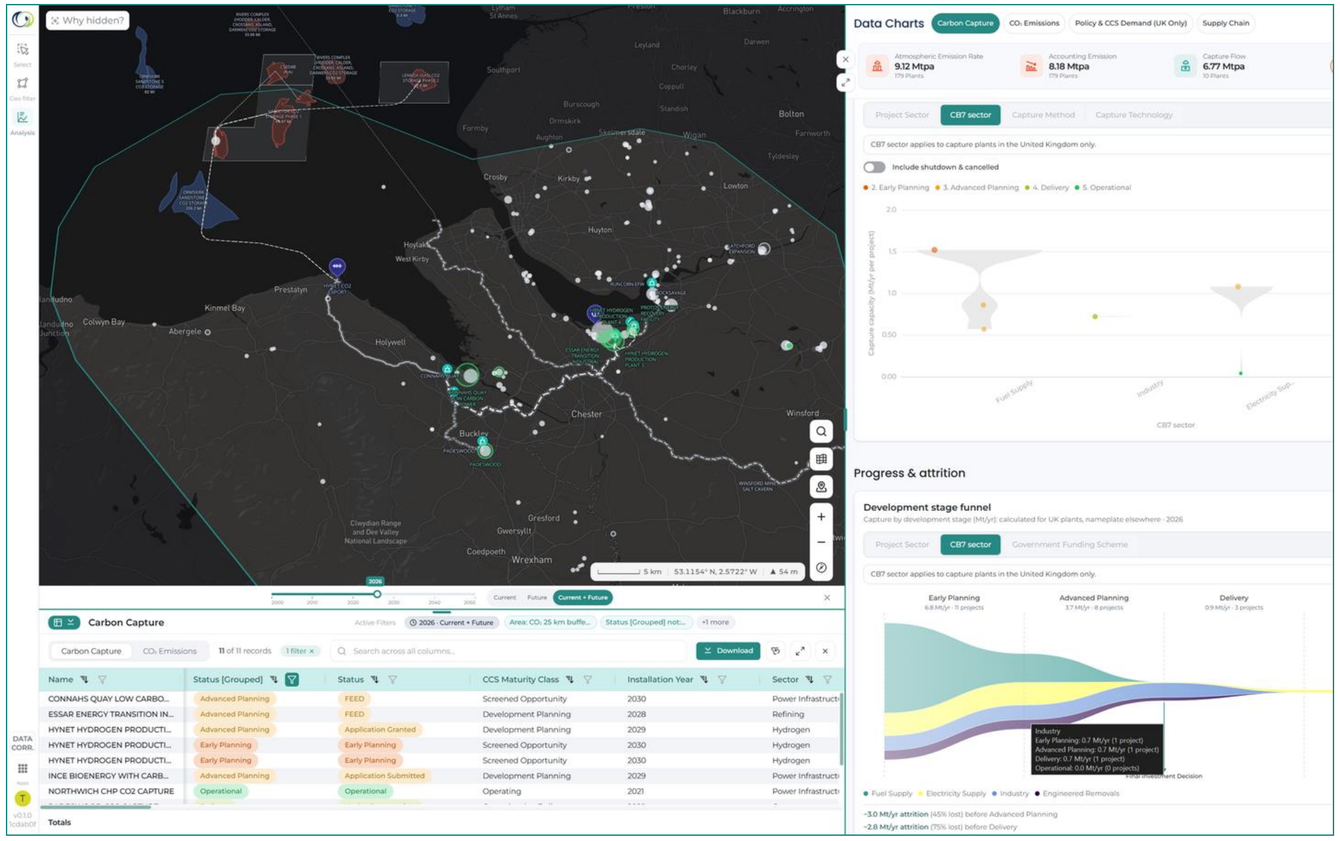
A single environment to explore relationships, investigate opportunities and understand market context.

Go beyond project data. Understand the connections. Identify the opportunities that matter.

Introducing the New Olsights Eye

Connected maps, analytics and market intelligence. All in one place.

Explore CCUS projects, industrial emissions, infrastructure and market opportunities through one connected platform. Move seamlessly between interactive maps, linked data and analytics to investigate relationships, uncover opportunities and make more informed decisions.



Connected Data Views

Explore synchronised maps, project information and analytics within one integrated environment.

Flexible Area Analytics

Select geographic regions, industrial clusters or custom areas and explore responsive charts and data.

Infrastructure Context

Understand CCUS developments alongside power, gas and supporting industrial infrastructure.

Scenario Exploration

Create, save and revisit filtered views to investigate different opportunities and market scenarios.

Data-Driven Executive Reports

Access connected intelligence through interactive summaries and reporting views.

Explore the market. Understand the connections. Make better decisions.

From Market Visability to Commercial Opportunity

olsightseye

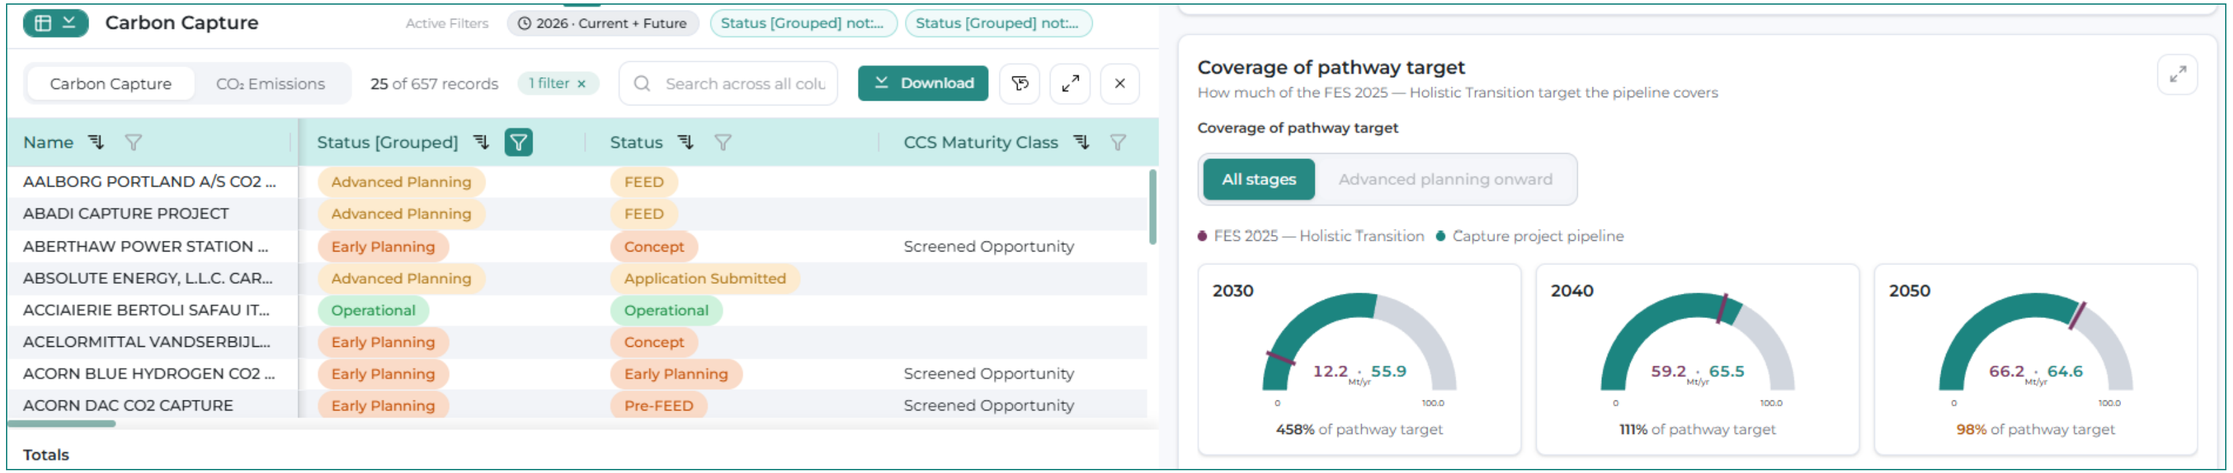
Understanding the CCUS market is about more than knowing which projects exist. Olsights Eye helps you explore where opportunities are emerging, identify those relevant to your business and understand the wider factors influencing their development.

1 Where are opportunities emerging?
Discover projects, emitters and regional activity.

2 Which opportunities are relevant?
Focus on the projects and markets that matter.

3 What could influence project delivery?
Explore infrastructure, timelines and dependencies.

4 Who should we be talking to?
Identify organisations and potential partners.



Whether you're developing projects, supplying technology, planning infrastructure or evaluating investments, Olsights Eye helps you understand where opportunities exist and what could influence their development.

Find the right opportunities. Focus your efforts. Move faster.

See Olsights Eye in Action

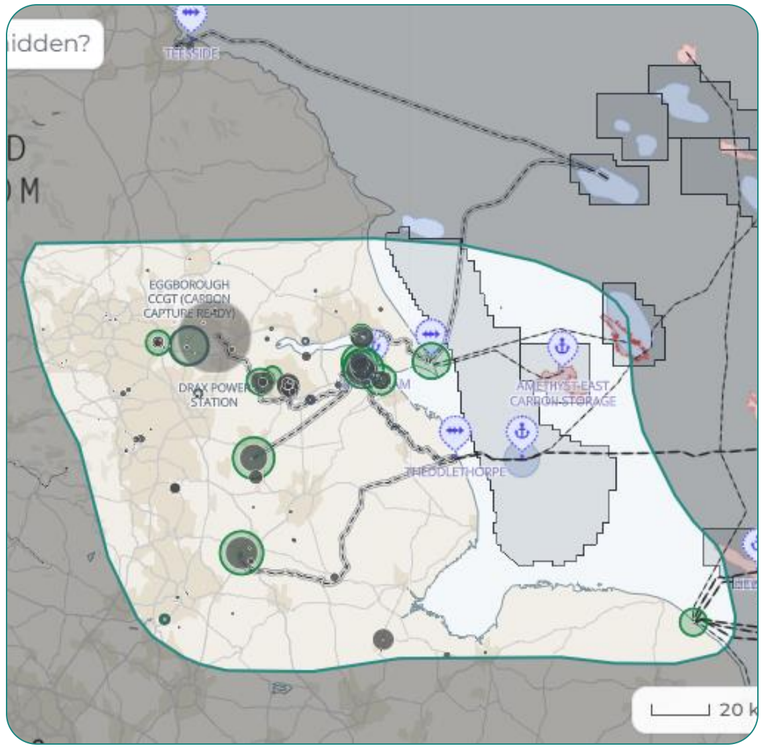
olsightseye

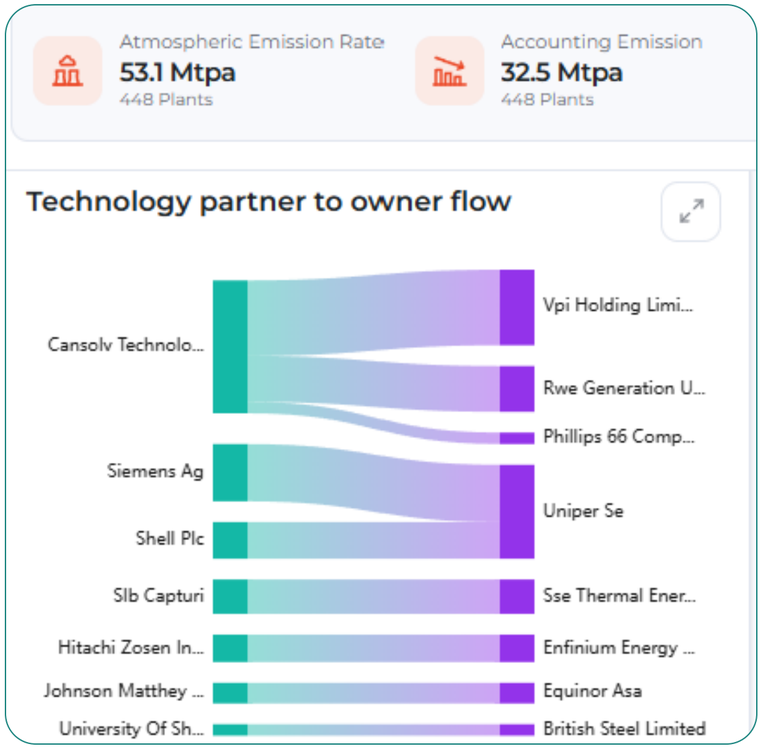
A simple connected workflow to explore the market, analyse key dynamics and identify opportunities.

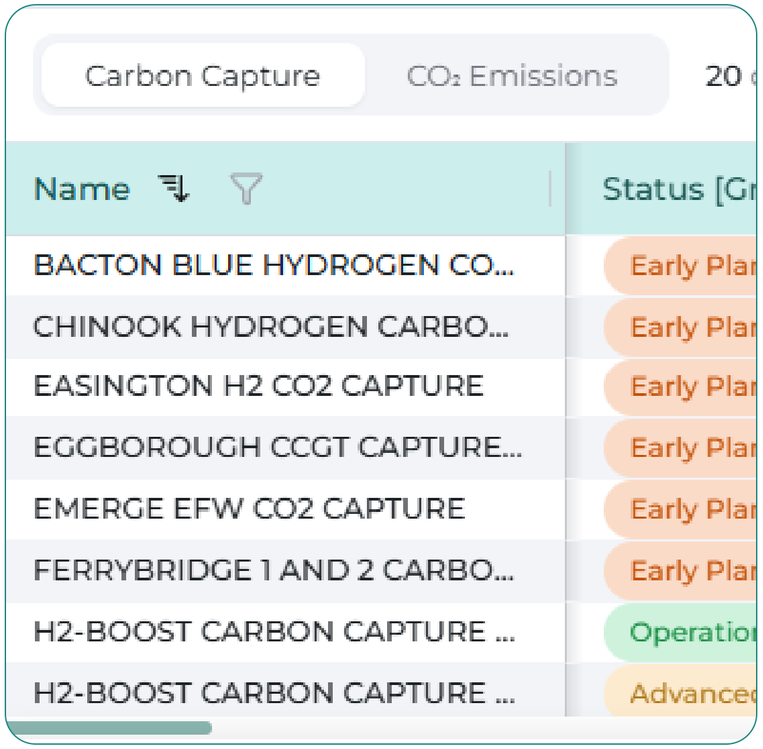
1 Select an area
Focus on a region, industrial cluster or area of interest.

2 Explore the connected intelligence
Explore projects, emissions, infrastructure and relationships across the value chain.

3 Identify opportunities
Filter and compare projects to identify opportunities relevant to your business.







From market context to commercial opportunities — all in one connected platform.

Proven Innovation. Trusted Partnerships.

Olsights combines deep energy-sector expertise with advanced geospatial technology. Working with leading industry partners, we turn complex infrastructure and planning challenges into practical, data-driven solutions.

Carbon Capture & Transport Readiness

Where Olsights Eye began

Originally commissioned by The Crown Estate, Olsights developed interactive maps and analytics to connect UK industrial emissions, carbon capture potential and transport routes to offshore storage. Built to solve a real-world CCUS challenge, this pioneering project became the first prototype of Olsights Eye, laying the foundations for today's connected energy intelligence platform.

REACT

Transforming electricity connection assessments

Developed for SSEN Transmission, REACT uses the underlying Olsights Eye technology to bring network intelligence, geographic analysis and scenario exploration into an interactive planning environment. It enables faster initial assessments of potential grid connection locations and network constraints.

VECTOR

Advancing national CCUS intelligence

Led by Olsights and sponsored by NESO, VECTOR is developing a connected approach to assessing CCUS capture, transport and storage viability across Great Britain. Combining infrastructure, capacities, timelines and dependencies, the project will advance evidence-based CCUS intelligence.

Built to solve real-world challenges. Evolved to power better energy decisions.

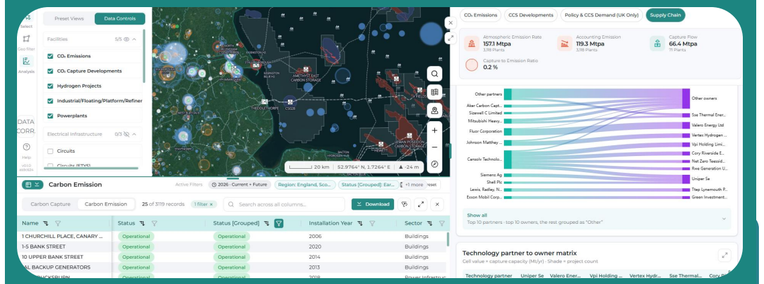
Solutions That Work Around Your Needs

olsightseye

Whether you want to explore the market independently, stay informed through expert analysis or solve a specific challenge, Olsights offers flexible ways to access the intelligence you need.

olsightseye

Self-serve market intelligence



Explore markets, projects and infrastructure independently through connected maps, data and analytics.

- Connected maps and analytics
- Project and market intelligence
- Flexible filtering and exploration
- Organisational access options

Explore Independently

CCUS Market Intelligence

Managed Intelligence

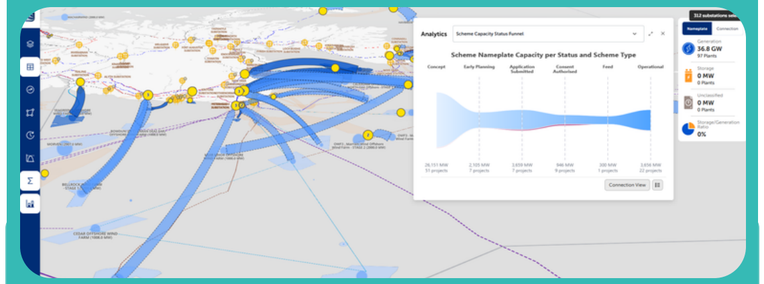
Stay informed with expert-led market intelligence, emerging trends and regular analysis, without the research burden.

- Expert-led market analysis
- Emerging trends and developments
- Quarterly intelligence updates
- Analyst support options

Stay Informed

Partner with Olsights

Bespoke intelligence partnership



Work with our specialists to address specific commercial, technical or strategic challenges through tailored intelligence and analysis.

- Bespoke market and project studies
- Custom dashboards and datasets
- Strategic and technical analysis
- Tailored intelligence solutions

Solve Your Challenge

What's Next for Olsights Eye?

Olsights Eye continues to evolve, with new datasets, deeper analysis and expanded capabilities connecting more of the energy system.

Available Now

Capture Intelligece
Projects, emitters, capacities and development status.

Transport Networks
Pipeline infrastructure, routes and capacity.

Storage Overview
Storage sites, capacities and timelines.

Connected Market View
Projects, infrastructure and market context in one place.

In Development

Deeper CCUS Intelligence
Connecting capture, transport and storage to explore dependencies and delivery constraints through VECTOR.

Advanced Analysis & Modelling
Evidence-based viability, project maturity, carbon accounting and energy-demand analysis.

Expanding Energy-System Coverage
Expanding global energy and infrastructure datasets beyond CCUS.

A growing platform for a connected energy future

From CCUS intelligence to a wider, connected view of the global energy system.
